

ALL ABOUT UNIVERSE

Hello Friends, this site is to give you all information about Universe and physics behind of Universe. So, visit our site build up your knowledge about Universe. Thank You

HOW ARE BLACKHOLES FORMED?

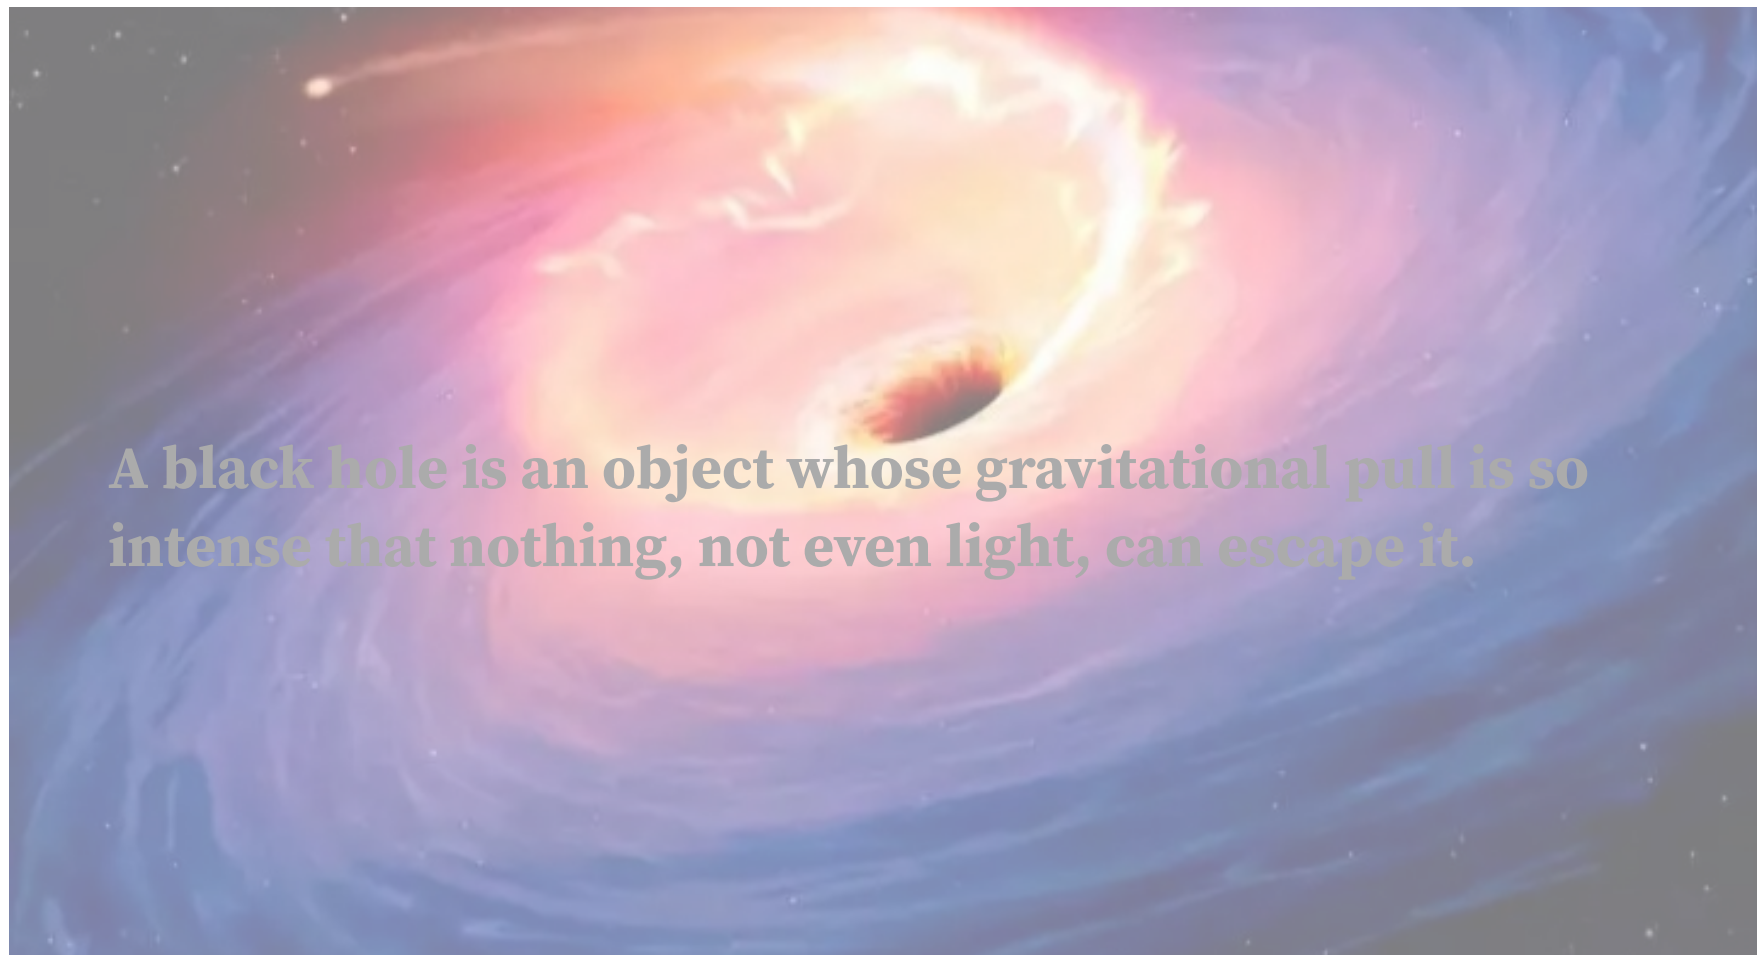

The common answer is, **BLACK HOLES** are formed by dying **planets** or **stars**.

But, there are some questions too. And the questions is, “ **Why the planets die? What is the reason behind it ?** ”. And for these questions, I have an useful answer.

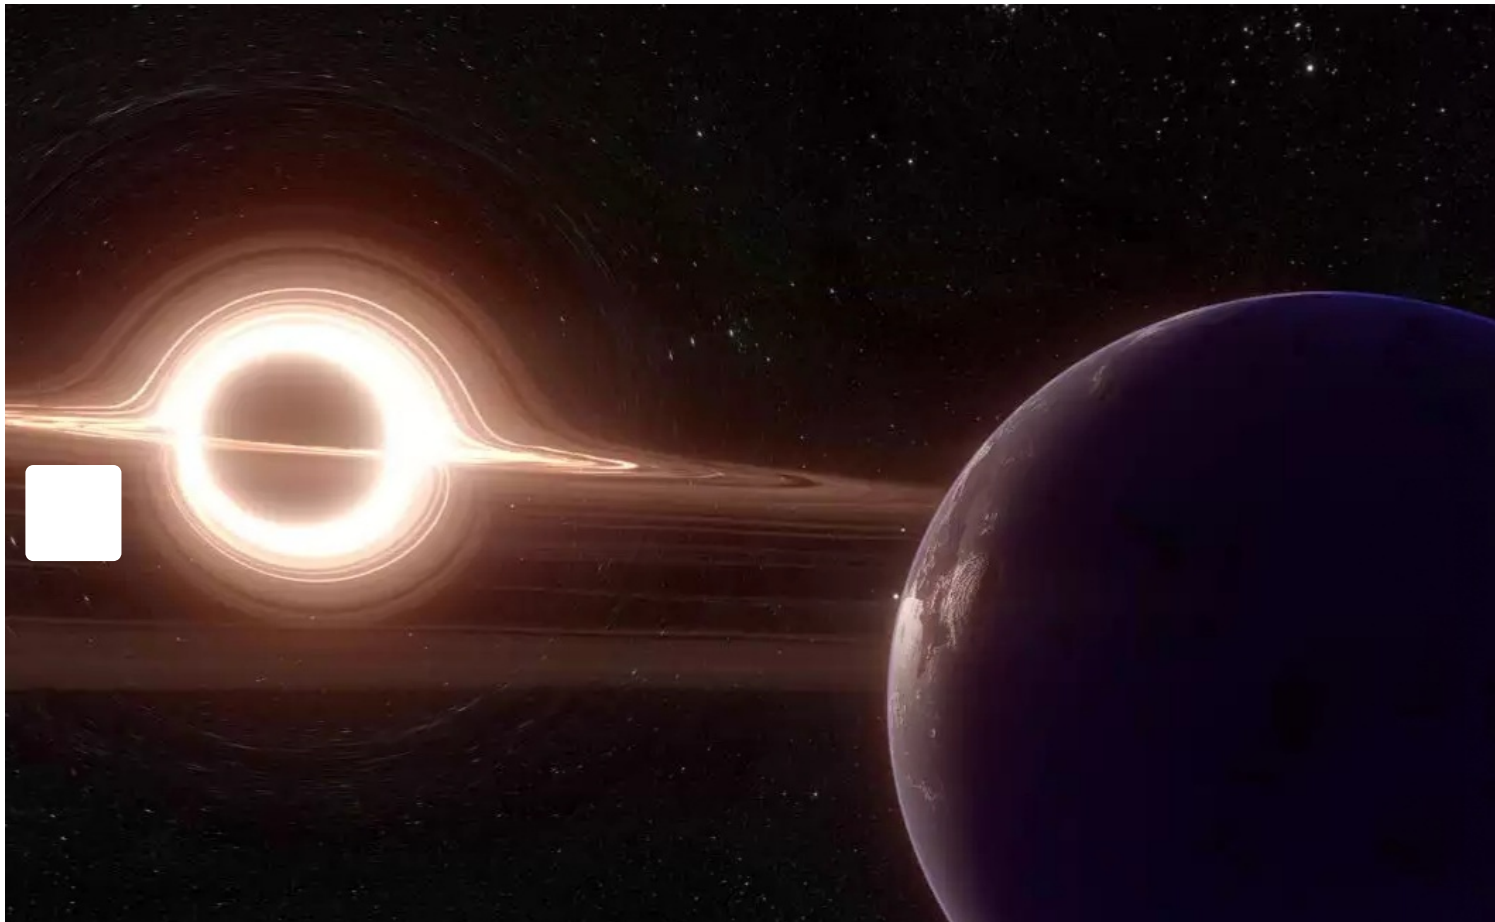

Then let's go to the journey of **blackhole**. But first of all we have to know “ **What is blackhole and how planets are formed ?**”

WHAT IS BLACKHOLE?

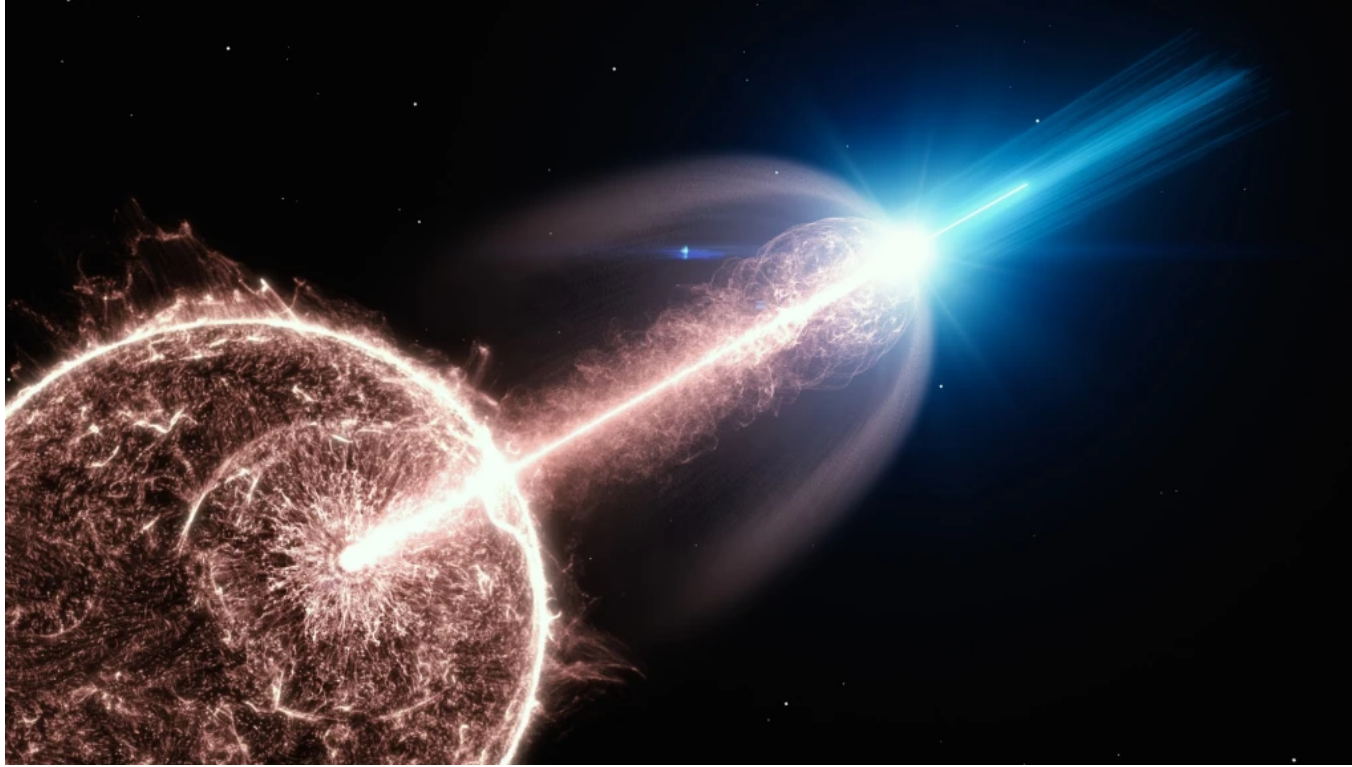

A black hole is an object whose gravitational pull is so intense that nothing, not even light, can escape it.

CREATION OF PLANETS AND BLACKHOLES

Planets are made up of **Helium** along with **Iron** are also present. The most important thing is that, the **Iron** , the **Radiation of planets** and **Gravitational pull** needs to be **stable**. Whenever, they become **unstable** there is a chance of explosion always. This explosion is known as **SUPERNOVA** and sometimes **HYPERNOVA BLAST** .

This picture is showing the ray of GAMMA RAY BURST

During this period, from a dying planet or star, a ray is released which is known as **GAMMA RAY BURST**. The **GAMMA RAY BURST** possesses **Energy (URJA)** which is equivalent to **Energy (URJA)** that our **Sun will release in One Thousand Crore Years**.

When **GAMMA RAY BURST** is released for upto **One minute**, a **BLACKHOLE** is formed.

SO NOW WE KNOW THAT HOW A BLACKHOLE FORMED AND I 've ALSO GIVEN A NAME TO BLACKHOLE i.e., **THIRD EYE OF LORD SHIVA** THAT HAS THE POWER TO DESTROY AND CREATE THE UNIVERSE.

IF YOU LIKE MY BLOG THEN KINDLY **SUBSCRIBE** TO MY BLOGGING SITE AND ALSO **SHARE** THIS PAGE WITH YOUR **FRIENDS** AND **FAMILY**. KINDLY PUT UP YOUR QUERIES ON MY SITE OR YOU CAN ALSO MAIL ME THE SAME.

THANK YOU
